

Jeffrey James Idodo

Lagos, Nigeria | jeffreyjidodo@gmail.com | +234 706 252 2649 | whoisjeff.dev

Backend engineer with 4 years of experience building secure, scalable server-side systems, APIs, and automation pipelines. Proficient in health data management, clinical workflow automation, and HIPAA-aligned backend infrastructure. Proven track record of reducing operational delays, improving system reliability, and shipping backend features that integrate seamlessly with frontend teams and third-party health platforms. Actively seeking part-time backend contracts in HealthTech — particularly roles focused on health data pipelines, clinical API integrations, EHR/EMR connectivity or secure patient data systems.

Available for focused engagements of 10–25 hours per week and can onboard quickly into existing engineering teams

CORE TECHNICAL SKILLS

- **Backend & APIs:** Node.js, Express.js, REST APIs, GraphQL, Serverless (Supabase Edge Functions, Vercel)
- **Databases & Auth:** PostgreSQL, Supabase (RLS, Auth, Storage), MongoDB, Row-Level Security, Signed URL workflows
- **HealthTech-Relevant Skills:** Health data pipelines, OCR for clinical documents, LLM-powered data extraction, Audit-trail design, Secure file handling, Role-based access control (RBAC), Compliant API architecture
- **DevOps & Tooling:** CI/CD, GitHub Actions, Vercel, Render, Automated testing pipelines, Markdown/API documentation
- **AI & Automation:** OpenAI API, HuggingFace, OCR pipelines, Content validation automation, Workflow automation

WORK EXPERIENCE

Senior Full-Stack Engineer | BFlow Solutions, California, USA (*remote*) December 2025 – Present

- Designed and implemented scalable backend systems using Node.js, Supabase, and serverless architectures to support internal tools and client-facing platforms.
- Built secure data access layers using Supabase RLS and role-based permissions — directly applicable to patient data protection in HealthTech environments.
- Developed signed URL workflows and serverless Edge Functions for compliant, auditable file handling.
- Architected automated backend documentation systems to accelerate onboarding and enforce API consistency across teams.
- Collaborated cross-functionally with product and engineering leads to define requirements and deliver backend features on schedule.

Project & Technology Officer | Eastley Park Limited, Lagos, Nigeria May 2025 – September 2025

- Built internal automation tools using Node.js and external REST APIs, improving operational efficiency by 20%.
- Documented internal backend processes and API flows to reduce onboarding friction and support team scalability.
- Designed and maintained data workflows connecting multiple business systems via API integrations.

Project Manager / Automation Engineer | Fobat Properties, Ibadan, Nigeria June 2022 – August 2024

- Automated reporting pipelines using Node.js, reducing data processing delays by 25%.
- Managed backend-dependent digital projects from requirements through delivery.
- Structured database-driven reporting workflows and improved accuracy and auditability of business data.

Network Operations Engineer | Suburban Fibreco, Abuja, Nigeria May 2016 – October 2017

- Maintained 99% SLA uptime for enterprise clients, demonstrating strong reliability engineering discipline.
- Diagnosed and resolved 200+ network and system issues efficiently, building a deep operational troubleshooting foundation.

RELEVANT PROJECTS

Slippiggy — AI-Powered Document Processing & Data Pipeline

Stack: Node.js · Supabase Edge Functions · OCR · OpenAI API · PostgreSQL · Vercel

- Built end-to-end OCR + LLM pipeline for automated receipt extraction and categorization — directly transferable to clinical document digitisation and health record ingestion.
- Designed serverless backend with secure, compliant data storage and retrieval workflows.
- Authored full API and onboarding documentation to enable third-party integration.

Developer Documentation & Backend Tooling Suite

- Built a suite of automation scripts for backend teams: markdown link validator, code example synchronizer, and automated markdown formatter.
- Demonstrates strong API documentation discipline and commitment to maintainable, auditable systems — critical in regulated HealthTech environments.

EDUCATION

B.Sc. Computer Science — Redeemer's University

2015 – 2019

Full-Stack Web Development — New Horizons Nigeria
